Custom Gages

Do you have a measurement problem that seemingly no common, off-the-shelf inspection instrument will solve?

Let us take a look at it! We may be able to offer or develop a standard turnkey measurement solution. If not, we'll design, build, and calibrate a custom gage or check fixture. These gages and fixtures can be qualitative (attribute, GO/NO-GO) or quantitative (variable data).

The sophistication of the design is scalable depending on how many parts will be inspected and how it will be used.

Not only does Q-PLUS provide the finest custom gages and check fixtures, but we also give you the confidence of knowing when they are or are not the right solution at the right time.

Why? Because we offer the alternative solutions as well. We will perform an in-depth analysis of your measurement needs. If we can program one of our CMMs (the ultimate universal variable data gage!) or even your own CMM to do the job in less time and for less cost, we'll provide a quote that includes these viable options as well.
